

1. Before installing, first check to ensure you have received all the package contents.

1x Top Framing

1x Bottom Framing

1x Left Framing

1x Right Framing

4x Stainless Steel Connectors

16x Stainless Steel Bolts

1x Allen Key

2x Mounting Strips

2. Using the 4 pieces of framing, lay the framing face down to connect their corners. When doing this, make sure that the top and bottom framing pieces have the wall mount strip connected. The mount strips should be facing in a downward angle. (Noted: The wall mount strips may be placed on the long or short framing pieces. This will depend if your frame is of portrait or landscape orientation). Using the stainless steel connectors and bolts, connect the corners of the framing pieces together. An allen key is included to assist in doing this. (Note: It is recommended to have 2+ persons assisting in the constructing of the frame. One should hold the 2 framing pieces tightly together while the other fastens the stainless steel corner connector and bolts into the back of the frame. This will ensure a close seal between the two pieces of framing.

3. Now place your picture, painting or mirror into the Vauci frame. (Note: It is the installers responsibility to prepare the Vauci frame correctly to ensure it will fit around the picture, painting or mirror properly; this includes any additional installation standards that may be needed for specific applications). All Vauci orders are produced to the specifications the customer requests.

4. Verify the wall is prepared correctly for installation. Determine the type of screws or bolts needed for the wall surface you are mounting to. Drill holes into the mounting strips. The holes should be drilled at the location that is best for the installation of your Vauci frame. Then, install mounting strips to the wall. Ensure the mounting strips are securely fastened to the wall.

5. Vauci frames come standard with a slim wall mount. The distance between wall and frame will be approximately 1/3" (9mm). Optionally we can provide wall mounts that create a distance of 1" or 2" between the wall and the frame. Hang the Vauci frame. Lift the entire product and securely engage the mounting strips that are attached to the backside of the Vauci frame to the mounting strips on the wall. (Note: It is recommended that additional persons may be required to engage the mounting strips. This will depend on the product you are installing).

Installation of your Vauci frame is complete. For additional information on Vauci products, please view our website www.vauci.com
